FOREWORD	v
CHAPTER 1	
ENERGETIC AND EXERGETIC PERFORMANCES OF THERMAL POWER PLANTS	1
1. Power thermodynamic cycles and their energetic efficiency	1
1.1. CARNOT cycle	1
1.2. Isodiabatic cycles	3
1.3. General reversible cycles	4
1.4. Cycles involving irreversible transformations	5
2. Thermodynamic power plants and total energetic efficiency	5
3. Exergetic approach	7
3.1. The quality factor of heat energy	8
3.2. The exergy function	9
3.3. The exergy of a fluid and the reference state	12
3.4. Representation of exergy in an enthalpy-entropy diagram	13
4. Exergetic expressions of work and efficiency	14
4.1. Work produced by a prime mover and exergetic efficiency	14
4.2. Work done on a fluid and exergetic efficiency	15
4.3. Work produced by a fluid undergoing a power cycle	16
4.4. The exergetic efficiency of a power plant	18
5. Comparison between energetic and exergetic approaches	19
6. Irreversibility of a combustion	23
6.1. The exergy of a fuel	23
6.2. The exergy of combustion gases	27
6.3. The exergetic efficiency of combustion	29
6.4. Influence of operating conditions on the irreversibility of a combustion	31
7. Irreversibility of energy transfer in a heat exchanger	33
CHAPTER 2	
STEAM POWER PLANTS	41
1. Overall description of a steam power plant	41
1.1. The hot source	42
1.2. The steam turbine	46
1.3. The cold source	47
2. Operation of a plant based on the RANKINE-HIRN cycle	53

2.1.	Energetic analysis	53
2.2.	Exergetic analysis	58
2.3.	Numerical application.....	62
3.	The feed-heating cycle	66
3.1.	Cycle with one feed-heater	67
3.2.	Cycle with multiple feed-heaters	75
4.	The reheating cycle	81
5.	Combining reheating and feed-heating.....	88
6.	Pressurized water nuclear plants.....	94
6.1.	Description and operation.....	94
6.2.	Numerical application.....	97
CHAPTER 3		
GAS TURBINES		105
1.	Overall description of a gas turbine.....	106
1.1.	Overall structure	107
1.2.	Combustion chambers	110
1.3.	Blading	111
1.4.	Peripheral equipment.....	112
2.	Operation of a gas turbine	113
2.1.	Power cycle work and energetic efficiency of the cycle.....	113
2.2.	Constitutive equations	116
2.3.	Parametric study	119
2.4.	Mechanical losses and total energetic efficiency	122
2.5.	Total exergetic efficiency	124
3.	Numerical application	125
4.	Cooling of the turbine blades	127
4.1.	Blade cooling systems	127
4.2.	Expansion of gases in a turbine with cooled blades.....	131
4.3.	Numerical application.....	134
5.	Gas turbine with a heat recuperator.....	135
6.	Gas turbine with multistage compression.....	140
CHAPTER 4		
COMBINED CYCLE POWER PLANTS		143
1.	Principle and advantage of combining two power cycles.....	143
2.	Dual-steam power plants	148
3.	Gas-steam combined cycles	151
3.1.	Combining a gas turbine and a steam plant with a single pressure level	152
3.2.	Combining a gas turbine with post-combustion and a steam turbine	158
3.3.	Rehabilitation of a steam plant by adding a gas turbine	160
3.4.	Combining a gas turbine and a steam unit with many pressure levels.....	163
3.5.	Gas-steam turbine with steam-cooling of the gas turbine blades.....	171

4.	Gas turbines with water injection	172
4.1.	Basic cycle with steam injection into the combustion chamber	172
4.2.	Combining a gas turbine with water vapour injection and a steam turbine	176
4.3.	Gas turbine with humid air	176
5.	Integrated gasification combined cycles.....	177
CHAPTER 5		
INTERNAL COMBUSTION ENGINES		
		181
1.	Overall description of the internal combustion engine.....	182
2.	Energetic analysis of the internal combustion engine operation	184
2.1.	Basic thermodynamic models.....	184
2.2.	In-depth analysis of the thermodynamic cycle	191
3.	Indicated and brake mean effective pressures	197
3.1.	Indicated efficiency and indicated mean effective pressure	198
3.2.	Mechanical efficiency and brake mean effective pressure	200
4.	Supercharging of internal combustion engines.....	201
5.	Total energetic efficiency and effective power	206
5.1.	Total energetic efficiency	206
5.2.	Effective power.....	208
5.3.	Energy balance	209
6.	Exergetic analysis of the operation of an internal combustion engine	212
6.1.	The concept of inergy	212
6.2.	Exergetic efficiency of combustion in a closed space	213
6.3.	Exergy balance	216
CHAPTER 6		
COGENERATION		
		221
1.	The concept of cogeneration	221
2.	The various cogeneration systems.....	223
2.1.	Cogeneration using a steam turbine.....	223
2.2.	Cogeneration using a gas turbine.....	225
2.3.	Cogeneration using an internal combustion engine	226
3.	Performance criteria of cogeneration plants	227
3.1.	Conversion factors and overall energetic efficiency.....	228
3.2.	Overall exergetic efficiency.....	229
3.3.	Relative saving of primary energy.....	231
4.	Cogeneration using a back-pressure steam turbine	233
5.	Cogeneration using an extraction steam turbine.....	238
6.	Cogeneration systems based on a gas turbine.....	243
6.1.	Gas turbine and pressurized water heat recovery boiler	243
6.2.	Gas turbine combined with a back-pressure steam turbine.....	244
6.3.	Gas turbine, post-combustion and back-pressure steam turbine	247
7.	Cogeneration using an internal combustion engine.....	249
